EXPERIENCE

Software Engineer, System Innovation Group

Dec 2020 – Current

- Designed and implemented React + .NET web applications with RESTful APIs, improving responsiveness and maintainability across systems.
- Spearheaded the migration of multiple legacy tools into a unified modular framework, reducing maintenance overhead and accelerating prototyping by 30%.
- Authored Interface Control Documents (ICDs), design specifications, and developer tooling guides used by cross-functional teams and external clients.
- Collaborated in Agile sprints with stakeholders to design and deploy proof-of-concept solutions for real-world engineering challenges.
- Improved API reliability and deployment pipelines using CI/CD automation and containerization (Docker + GitHub Actions).

Software Engineer Intern, Department of Defense - NSIN

May 2020 - Sep. 2020

- Built a 3D simulation tool for KC-135 aircraft maintenance training, improving realism and reducing training time for airmen.
- Designed and implemented a VR application prototype that enhanced hands-on maintenance training using Unity and custom sensor integrations.
- Partnered directly with domain experts and airmen to translate real-world requirements into scalable, maintainable software solutions.

Research Assistant, Center for Computer Vision Research UCF

Sep. 2017 - Mar. 2020

- Developed a synthetic data generation framework to augment training datasets, improving ML testing accuracy by 13%.
- Authored internal research documentation and contributed to model reproducibility and automation pipelines for ML experiments.

EDUCATION

Master of Science in Computer Science, Georgia Institute of Technology

May 2025

Coursework: Machine Learning, Computer Vision, Advanced Software Development, Networking

Bachelor of Science in Computer Engineering, University of Central Florida

May 2021

Coursework: Object Oriented Programming, Software Development, Web Applications, Embedded Systems

PROJECTS

Personal Project | BDLIC Actuator

2024

Developed a robotic actuator with Field-Oriented Control (FOC) enabling precise position, velocity, and torque regulation via CAN interface.

Swamphacks | Skin Disease Diagnosing Mobile App

2020

Created a computer vision mobile app using CNNs to detect skin disease from photos, deployed via Flask backend and GCP. It was awarded Most Technically Impressive by the judges.

TECHNICAL SKILLS

- Languages** C#, Python, TypeScript, JavaScript, Java, C++, SQL
- Frameworks** React, .NET, ASP.NET Core, Node.js, Express, Flask, Django, TensorFlow, PyTorch, OpenCV
- Databases** PostgreSQL, MariaDB, MongoDB, SQLite
- Cloud & DevOps** AWS, Azure, Docker, Bitbucket Pipelines, CI/CD, Linux
- Tools & Technologies** Git, REST APIs, SignalR, Entity Framework, GnuRadio, Agile/Scrum, Jira
- Concepts** Object-Oriented Programming (OOP), Design Patterns, Microservices, Software Architecture, Testing, API Integration, Machine Learning
